

Compare.

There's really no comparison.

For example, this Lista drawer with 11 inch sidewalls and back wall gives you 6336 cubic inches of fully usable, stackable space.

Our competitors with their partial side and back walls give you as little as 4024 cubic inches of real, usable storage. Over 2,000 cubic inches, 50% more – and that's only one drawer.

Maximum capacity, maximum value.

Lista offers 7 different full sidewall heights, as opposed to our competitors who offer as few as 3 or 4. And because Lista drawers have the reinforcing strength of full sidewalls, our handles are always positioned at the top for ease of use. Our competitors need to position the handle lower where the sidewall reinforces it, so it doesn't pull away with heavy use.

Extra safety too.

Lista drawer handles run end to end and are flush with the face of the housing so they can't snag on clothing or anything else. Lista's cabinets also feature the Preventip® one-drawer-at-a-time locking system.

When comparing Lista's cabinets to other brands, it's like comparing apples and oranges.

Full height sidewalls are just the beginning.

Lista's 3 main US-made competitors simply can't compare when you look at their features next to Lista's.

Lista's partition and divider heights match the drawer sidewall height, making full use of the drawer's cubic capacity and maximizing useable space.

Lista vs. the three other leading US manufacturers of drawer storage cabinets.

NOTE: based on cabinets purchased and received August 2006 and catalog information available at that time.
